

# World Health Organization data

Dental decay decreased over time in a similar manner in all developed countries

Tables produced by Chris Neurath

**Tooth Decay Trends: Fluoridated vs. Unfluoridated Countries**  
(All data from World Health Organization)

When 3 countries which use fluoridated salt (35-45% of population) are eliminated, the same conclusion must be reached:

Dental decay decreased over time in a similar manner in all developed countries

**Tooth Decay Trends: Fluoridated vs. Unfluoridated Countries:**  
(All data from World Health Organization; Salt and Tablet F countries excluded)
